Process Safety Hazard Identification (HAZID) Training Course

Hazard identification (HAZID) is fundamental to the safe design and operation of any process plant or system. HAZID is a technique for early identification of potential hazards and threats in any given process. Knowledge and sound application of HAZID techniques will help you prevent and protect against the effects of process safety incidents.

HAZID requires a systematic and methodical approach to ensure all risks are recognized, prioritized and managed.

This course will provide you with the knowledge and skills to help you plan and execute a HAZID study and write up a HAZID report. You will explore a range of hazard identification techniques, their advantages, limitations and when to apply them.

Learning Outcomes:

By the end of this course, you will understand:

- ✓ What process hazards and risk mean
- ✓ What HAZID tools are used for each stage of a project cycle
- ✓ How to conduct a HAZID workshop
- ✓ How to prepare a HAZID report

Methodologies:

- Lecture
- Professional coaching & guidance
- Group discussions
- Question & answer sessions
- Group problem-solving

Who Should Attend:

- Process Safety Engineers, Managers, Supervisors and Operators, Safety Personnel
- Environmental Engineers and professionals
- Engineers and Early-career Professionals

Course Content:

Day 1

- Process hazards and safety incidents
- Hazard identification through the process life-cycle
